WORK EXPERIENCE

Varadhi Smartek Pvt. Ltd
[Nov 2018 – APR 2019]

School ERP:

Project Description : The school ERP project is purely developing for the School. Which has three kind of different functionality in a single app such as Master Admin(this module is for the School Authorized person like CEO, Chairman, Principal etc.), Parent(this module is for the student's parents to track their children's all kind of academic details, bus tracking system using maps etc.), Teacher (it is for the teacher to track their status of their performance, their class details, their timetable etc.).

BackEnd : Firebase

Employee App:

Project Description : Employee application is totally based for the employee who works in an organization. It allows the employees to track their own details like such as their weekly report, work performance, Leave applying. Team Lead can see his/her own teammates reports, he can assign his teammates weekly work and send their works to them particularly. The Management peoples can send their greetings or any other messages to their employees through the Notification.

BackEnd : Firebase

Dnain Technologies Pvt. Ltd

[MAY 2019 – TILL DATE]

Genuine (Real Estate):

Project Description : It depends purely on Real Estate project. It adds the client to improve his real-estate business. Where he can buy / sell his plots with a affordable price. The functionality includes with projects allotting, plots allotting, property maintenance, promoter, booking agreement, Map location. Career part for job seekers, authentication page role access, plots bookings and Schedule Remainder. The admin can also take up all kinds of day to day reports.

BackEnd : CodeIgniter, MYSQL

DNain App:

Project Description : This application is totally for the employer who maintains the DNain organization. The Admin can maintain his whole company inbound and outbound activities like Customers, Products maintaining, Career Section, Plans, Reports, Purchases, Services & Supports , discount and trial mode creation for all DNain products. App also maintains the TimeSheet where employee submits his daily work routine and Setting Role (Permission) for page access.

BackEnd : CodeIgniter, MYSQL

MIShopee (E-Commerce Site):

Project Description : An E-commerce Website which connects the Seller and the Customer with an Admin as a Intermediate. The User dashboard allows customer to choose variant of products to their need and add them to Cart and then checkout, and can track their order. The Seller can receive the customer's order and process it accordingly. Here the Admin can add the seller, add products, view order history, order forwarding to non-direct sellers, giving permission for page access.

BackEnd : CodeIgniter, MYSQL

Business Raja (CRM):

Project Description: The Project is based upon the CRM Management where the Reseller shop peoples can manage the Sales for their customers and the Purchase from their vendors. And Day-to-Day transaction can also be tracked by the graphical data for enhancing their growth. The invoice for both sales and purchase are being maintained in it. The highlight for this project is the products can be added through the voice commands to make the user more comfortable to include their products instead of typing on the keyboard

BackEnd : Django, PostgreSQL.

Bike Service App:

Project Description: This is an bike servicing app where the registered users can book their bikes to the nearest bike servicing dealer. Once the user goes for the servicing his request will be ready for the service. The dealer can updates the service estimation cost of the required spare parts. After the service is done the invoice of an service will be sent to particular user. The dealer can also handle his customer service request for the non-registered user.

BackEnd : Django, PostgreSQL.

TMN (Doctor Patient App):

Project Description: The application stands for the Treat Me Now. It is an Doctor and patient app. The need of this application is to get a quick appointment with the doctor. The doctor and user has a separate login. User can check the nearby of 5km radius of available doctors to get treated fast with some clicks. And doctors can also manage their available days and shift for visiting the hospitals, they can also limit their visiting tokens according to his convenience. Another module for this app is for medical and lab persons, where the doctors can recommend to them by personally.

BackEnd : Django, PostgreSQL.
